

# borosilicate pyrex glass cake cover

## Product Details

Item No.	SGDS15041716
Material	Borosilicate/pyrex glass
Process	Hand made
Samples time	1. 5 days if at exist shaped and size of glass 2. 15 days if need new shape or size of glass
Packing	Normal packing,4 pcs into inner box, 48 pcs per carton
Product Capacity	500,000~1,000,000 pcs per month
Delivery time	Within 35 days after the sample and order confirmed
Payment terms	30% deposit by T/T in advance and the balance against the copy of B/L
Shipment	By sea, by air, by Express and your shipping agent is acceptable
Product Features	1. Hand made <b>borosilicate glass</b> with high quality 2. Suitable for used in hotel, home, etc. 3. It is eco-friendly 4. Meet FDA test & CA 65 test
For your choices	1. Different designs and sizes for choice 2. Any color painted, frost, electroplate, pattern laser carver processing 3. Special package like shrink wrap, color gift box, white gift box etc. 4. We have exclusive workers for quality control 5. We have professional workshop and warehouse to ensure the delivery time

## Product Features

The double wall glass can be used for **cold or warm beverages**.

Its unique design is appealing to the eye when filled with your favorite beverage.

With its double layer of borosilicate glass it appears as though the liquid is 'floating' within the glass.

They will not sweat when filled with a cold beverage, so you will not have to use a coaster.

The double wall creates a thermal effect, helping to **keep your cold drinks cold and your hot drinks hot for longer periods of time**.

These mouth blown glasses are an exciting product for **any home, restaurant and cafe and they are a definite conversation piece**.

The double layered glassware is made from durable Borosilicate glass.

Borosilicate glass is a strong heat-resistant glass traditionally used to make scientific lab glass.

Stronger than traditional "soda-lime" glass, borosilicate can be used for everything from drinkware to cookware.

Borosilicate glass substitutes boron oxide in place of the soda and lime used in everyday glassware.

The boron oxide acts as the glue holding the silicate together. Due to small size of boron particles, the glass is held together

tighter, resulting in a stronger, lighter glass.

Borosilicate glass doesn't need to be as thick as traditional glass to be just as strong due to the bonding capability boron oxide.

Borosilicate is simply a different type of glass that is resistant to temperature swings and scratching. Because the particles are held together so tightly, borosilicate glass is resistant to temperature swings,

In addition to being dishwasher safe borosilicate will not become cloudy over time; you can rest assured that after 1,000 cycles, the glass will be as clear as the day you bought it.

#### Warm Tips

- don't drop ice into them first. put the liquid in first.
- don't use automatic ice dispensers on them. put the ice in by hand.
- don't use metal spoons (bamboo teaspoons are hip now anyway).
- handwash, or if you machine wash, top rack them and leave SPACE around them.
