Product Features

The double wall glass can be used for cold or warm beverages. Its unique design is appealing to the eye when filled with your favorite beverage. With its double layer of borosilicate glass it appears as though the liquid is 'floating' within the glass. They will not sweat when filled with a cold beverage, so you will not have to use a coaster. The double wall creates a thermal effect,

helping to keep your cold drinks cold and your hot drinks hot for longer periods of time. These mouth blown glasses are an exciting product for any home, restaurant and cafe and they are a definite conversation piece. The double layered glassware

is made from durable Borosilicate glass. Borosilicate glass is a strong heat-resistant glass traditionally used to make scientific

lab glass. Stronger than traditional "soda-lime" glass, borosilicate can be used for everything from drinkware to cookware. Borosilicate glass substitutes boron oxide in place of the soda and lime used in everyday glassware. The boron oxide acts as the glue holding the silicate together. Due to small size of boron particles, the glass is held together tighter, resulting in a stronger, lighter glass. Borosilicate glass doesn't need to be as thick as traditional glass to be just as strong due to the bonding

capability boron oxide. Borosilicate is simply a different type of glass that is resistant to temperature swings and scratching. Because the particles are held together so tightly, borosilicate glass is resistant to temperature swings, In addition to being dishwasher safe borosilicate will not become cloudy over time; you can rest assured that after 1,000 cycles, the glass will be as clear as the day you bought it.

Warm Tips

- don't drop ice into them first. put the liquid in first.
- don't use automatic ice dispensers on them. put the ice in by hand.
- don't use metal spoons (bamboo teaspoons are hip now anyway).
- handwash, or if you machine wash, top rack them and leave SPACE around them.

Office & Sample Room
